DESIGNING BRAND GUIDELINE

BOXITY.ID

Boxity is a web-based ERP application developed by myself. This application was launched in June 2021 and has undergone several updates, including the development of new features. In the first year, Boxity only had basic features, such as Issue Center: A place to report and track problems faced by users Candidate management: Candidate management system for the recruitment process Job vacancy management: Job vacancy management system Blog management: Blog management system to share information In the second year, Boxity was developed to include new features, such as: Stock management: Stock management system to track merchandise Financial reporting: Financial reporting system to produce financial reports Purchase/sales management: Purchasing and sales management system to track Attendance register transactions: The attendance register management system for tracking Boxity employee attendance is designed to make it easier for businesses to manage various aspects of their operations. This application offers various features that can help businesses to increase efficiency and productivity.

LOGISTICS COMPANY

BTSA

LOGISTICS

BTSA Logistics is a trusted logistics company with more than 20 years of experience. The company offers a variety of logistics services. I have a project here to develop website traffic, website development, and digital marketing, and I also have responsibility for building a web application which includes a job vacancy module and its candidates, a module for handling internal problems in the office, and also a management module blog to the main website.

OCTANS BY BOXITY

Short Brief

Octans is a child of the ERP module split application from Boxity, I broke it down so that it can be used in micro, small, and medium businesses, the modules contained here are outgoing and incoming transactions, budgets, income, expenditure, and profit and loss reports. I also included a role/permission function so that I can monitor problems/new users in this application.
